

ELN: Well Plate Operations -- Biology: Basic Annotation Information

One of the well plate annotation operations available in the ELN concerns biology-oriented plates. Here, you can create a general-purpose biology well plate (Fig 1). Three parameters must be defined before clicking 'Annotate Plate' will work: plate name (any label you wish to assign/designate as a name, up to 100 characters in length), configuration (the number of wells on the well plate), and plate stamp category (source, destination, or N/A).
