

Data Viewer

The public-facing LIMS website serves as a data viewer for files uploaded to the system, as shown in Fig 1.

Fig 1. Highlighting the “Data Viewer” link associated with each instrument.

When you go to the LIMS website, you are greeted by the Search screen, as shown in Fig 2. You can search by several different factors: experiment name, instrument type, data category, and so on., More search categories will be added at a future date. You can also restrict the search to certain periods of time, if you so choose. Upon executing a search, if there are results to be returned, you will see them as experiment “cards”, with a short summary of information, under the Search panel.

Fig 2. Data viewer Search & Results panel.

Following a successful search, you may download any of the returned files for further exploration and analysis.
