**Description:** "UV Curing Oven " **Manufacturer:** "AMP"

#### **About**

The UV curing oven is located in Elings Hall 2436.

Some Carbon Resins used in the Form 2 3D printer can benefit from post process curing. Each resin has a specific hardening curve which can be found within the reference material which will indicate the ideal time and temperature to be set on the AMP UV curing oven.

# **Training Documentation**

## **Detailed Specifications**

LED source: 365 nm

32 mW/cm^2 center of upper tray

## **Safety Concerns**

\* Allow at least half an hour for IPA to evaporate before placing part in Form Cure \* Allow time for the Form Cure to cool off before removing parts \* Do not operate form cure with lid open

# **Operating Proceduces**

- 1. Any part to be cured needs to be washed in the FormWash with IPA BEFORE being placed in the form cure.
- 2. Supports can be removed before or after curing process.
- 3. Wait 30 minutes after washing to allow all remaining IPA to evaporate
- 4. Check the reference material for selected resin to determine ideal time and temperature for curing
- 5. Use the dial on the front of the FormCure to set time and temperature
- 6. Place part within the FormCure→ press start.
