Chemspeed Automated Chemistry Platform

Chemspeed	
×	
Tool Type: Robotic Polymer Synthesis Platform	

Location: Elings Hall 2411

Supervisor	Tool Lead
Morgan Bates	Morgan Bates
morganbates@ucsb.edu	morganbates@ucsb.edu

Description: Robotic Polymer Synthesis Platform Manufacturer: Chemspeed Technologies

About

The Robotic Polymer Synthesis Platform integrates robotic handling with an automated powder and liquid handler/dispenser and high-throughput characterization, enabling the characterization of monomers, polymers, and material properties on the same timescale with which they can be made, overcoming traditional challenges to high-throughput materials discovery. Additional features include temperature-controlled mixing stations with small scale reaction plates, photochemistry capability, and the option to conduct reactions under superheated conditions and pressure.
