

# Chemspeed Automated Chemistry Platform

Chemspeed	
	
<b>Tool Type:</b> Robotic Polymer Synthesis Platform	
<b>Manufacturer:</b> Chemspeed Technologies	
<b>Location:</b> Elings Hall 2411	
<b>Principal Scientist</b>	
Morgan Bates	
morganbates@ucsb.edu	

## About

The Robotic Polymer Synthesis Platform integrates robotic handling with an automated powder and liquid handler/dispenser and high-throughput characterization, enabling the characterization of monomers, polymers, and material properties on the same timescale with which they can be made, overcoming traditional challenges to high-throughput materials discovery. Additional features include temperature-controlled mixing stations with small scale reaction plates, photochemistry capability, and the option to conduct reactions under superheated conditions and pressure.

## Detailed Specifications
