## **About**

Thermo Fisher TSQ Altis inline triple quadrupole mass spectrometer coupled with an ultra-high-performance liquid chromatograph (UHPLC/MS/MS) for separation and analysis of synthesized bioderived monomers. The device can accurately measure between 5-2000 m/z mass range with Active Ion Management. The device also contains 6 channel high-pressure solvent blending, allowing a variety of solvents to run through various columns depending on the compound.
