

# Data Viewer

The public-facing LIMS website serves as a data viewer for files uploaded to the system, as shown in Fig 1.

*Fig 1. Highlighting the “Data Viewer” link associated with each instrument.*

When you go to the LIMS website, you are greeted by the Search screen, as shown in Fig 2. You can search by several different factors: experiment name, instrument type, data category, and so on., More search categories will be added at a future date. You can also restrict the search to certain periods of time, if you so choose. Upon executing a search, if there are results to be returned, you will see them as experiment “cards”, with a short summary of information, under the Search panel.

*Fig 2. Data viewer Search & Results panel.*

Following a successful search, you may download any of the returned files for further exploration and analysis.
